

## Imagining a nature-based future for Europe in 2120

Nature-based solutions at the heart of a visionary approach for accelerating the transition to a climate resilient and nature-positive future.

elevation (land and seabed)

existing urban area

existing high-speed railway

existing wind farms at sea

existing agriculture

existing forests

existing rivers and streams

developing wind farms at sea

developing wetlands

developing food and biomass production at sea

developing (mussel) beds and (coral) reefs

developing protected areas at sea

developing areas for infiltration to groundwater

developing high-speed railway

developing different kinds of sustainable agriculture

developing nature based coastal protection

developing new forests and ecological regeneration of existing forests

developing hydrogene hubs and solar fields at sea

developing of new green urban areas and 'greening' existing urban areas

nature based protection of areas prone to flooding (when sealevel rises 2 m)
